

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph 69, as follows:

[0069] In another embodiment, the invention provides for mobile decontamination module for mixing liquid decontaminants and dispensing liquid-based or foam-based decontaminants. Specifically, as depicted in Figures 6, 7, and 8, the apparatus described above can be incorporated into a mobile decontamination module 44 (e.g., a wheeled vehicle 50 or heavy transport vehicle 53). The mobile decontamination module 44 includes the plurality of tanks 11, pump assembly 12, manifold 13, and the unitary drain and fill assembly 14 (or the separate drain assembly 34 and separate fill assembly 35) as described above (see Figures 1 and 4), and further includes a platform 45 having wheels or rollers 63 and an enclosure 46. As secured to a vehicle 50, the module 44 is commonly referred to as a GL1800DAP decontamination system. In a preferred embodiment, the module 44 is mounted on an International 4700 or Freightliner M2 chassis having a diesel engine and an automatic transmission. Specifically, the mobile decontamination module 44 includes the platform 45 for supporting the tanks, the pump assembly 12, the unitary drain and fill assembly 14 or separate drain assembly and separate fill assembly, the manifold, and the enclosure.
